

Zio Money Admin — Feature → API Integration Map

Every screen in the sidebar/tab workspace, the component that renders it, where its data comes from (React Context vs. direct call), and every Remittance/Auth API endpoint it integrates with in Live mode. Generated from the current state of `data/tabRegistry.tsx`, `contexts/*.tsx`, and `lib/*Api.ts`. Cross-reference with `docs/03-api-reference.md` for full endpoint details.

LOCAL

demo/mock data only — no live backend call today

ACCOUNTS DETAIL				
FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Correspondence Report	CorrespondenceReportCard	local data	LOCAL	data/correspondenceReportData.ts — no confirmed upstream endpoint
Report Results	CorrespondenceReportResultsPanel	local data	LOCAL	Same source as Correspondence Report
Ledger List	LedgerListPanel	local data	LOCAL	data/ledgerData.ts — CRUD is in-memory only
Create New Ledger	CreateLedgerForm	local + RatesContext	LOCAL	Currency dropdown reads RatesContext cache, no submit endpoint yet
Voucher Entry	VoucherEntryPanel / VoucherEntryForm	VouchersContext (local)	LOCAL	VouchersContext is localStorage-only, no backend module exists
Voucher Approval	VoucherApprovalPanel	VouchersContext (local)	LOCAL	Same as Voucher Entry
Statement of Account	StatementOfAccountPanel	local data	LOCAL	data/statementOfAccountData.ts, statementOfAccountReportData.ts
Daily Report	DailyReportPanel	local data	LOCAL	No reporting endpoint wired yet
Summary Report	SummaryReportPanel	local data	LOCAL	No reporting endpoint wired yet

PARTNERS				
FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Partner Info	PartnerInfoPanel PartnerManageModal	PartnersContext	GET /api/partners/list → obtainAllRemittancePartner POST /api/partners/insert-agent-partner → insertAgentPartner POST /api/partners/update-email → updateRemittancePartnerEmail POST /api/partners/update-accept-pin → updateRemittancePartnerAcceptPin POST /api/partners/insert-txn-currency → insertRemittancePartnerTxnCurrency POST /api/partners/insert-country → insertRemittancePartnerCountry POST /api/partners/change-password → changeRemittancePartnerPassword	Manage modal drives the update actions; list is loaded once by PartnersContext
New Partner	CreatePartnerForm	direct (partnersApi)	POST /api/partners/register → insertRemittancePartner POST /api/partners/insert-txn-currency → insertRemittancePartnerTxnCurrency POST /api/partners/insert-payout-config → insertRemittancePayoutPartnerConfiguration	Three-step create flow chained in one submit handler
Balance & Credit Adjustments	PartnerBalanceCreditPanel	direct (partnersApi)	POST /api/partners/add-actual-balance → addActualBalance POST /api/partners/update-credit-limit → updateCreditLimit	Reads partner list from PartnersContext for the picker

Payout Configuration	PayoutConfigurationPanel	direct (partnersApi)	POST /api/partners/get-payout-config → /obtainRemittancePayoutPartnerConfiguration POST /api/partners/update-payout-config → /updateRemittancePayoutPartnerConfiguration	Edit-only view; initial creation happens on the New Partner form
Payout Banks	PayoutBanksPanel	direct (partnersApi)	GET /api/partners/payout-partner-networks → /getPayoutPartner POST /api/partners/payout-bank-update → /requestPayoutBankUpdate	getPayoutPartner's response shape is ambiguous upstream — treated as unknown

CUSTOMER DETAIL

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Corporate Customer	CorporateCustomerPanel (KycMethodPanel, CompanyProfileForm)	local data	LOCAL	No corporate-KYC endpoint wired yet
Customer Details	CustomerDetailsPanel (PersonalDetailsForm, ContactDetailsForm, AdditionalInformationForm)	KycContext, PartnersContext	POST /api/kyc/update-customer → /updateCustomer	Multi-step form; commits via updateCustomer on final submit
KYC Approval Queue	KycApprovalQueuePanel KycApprovalModal	KycContext	GET /api/kyc/pending → /getAllUnapprovedKycs POST /api/kyc/approve → /InsertApprovedKYC POST /api/kyc/compliance-approve → /InsertApprovedComplianceKYC	Two approval paths: standard vs. compliance-team approval
Approved KYCs	ApprovedKycsPanel	KycContext	GET /api/kyc/approved → /getAllApprovedKycs	
Beneficiaries	BeneficiariesPanel BeneficiaryFormFields, EditCustomerModal	BeneficiariesContext, KycContext	GET /api/beneficiaries → /beneficiaries POST /api/beneficiaries → /beneficiaries DELETE /api/beneficiaries/{id} → /beneficiaries/{id}	senderUserName / beneficiaryKycStatus are client-only fields merged in after fetch

REPORTS

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Define Credit Limit	DefineCreditLimitPanel CreditLimitTable, CreditLimitBanner, CreditLimitLogModal	local data	LOCAL	data/creditLimitData.tsx — no confirmed upstream endpoint

EXCHANGE RATE & COMMISSION

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Exchange Rates	ExchangeRatesPanel ExchangeRateSetupModal	RatesContext	GET /api/rates/get-all-countries → /getAllCountries POST /api/rates/get-country-wise-ex-rate → /getCountryWiseExRate POST /api/rates/update-rate → /UpdateRate POST /api/rates/update-csv-rate → /UpdateCsvRate	buying/selling quoted against home currency NPR
Country Wise Exchange Rates	CountryWiseExchangeRatePanel	RatesContext	POST /api/rates/get-country-wise-ex-rate → /getCountryWiseExRate	Read-only drill-down of Exchange Rates by country
Service Charges	ServiceChargesPanel ServiceChargeSetupModal	RatesContext	GET /api/rates/get-service-charge → /getServiceCharge POST /api/rates/service-charges-save → /Service_Charges_save POST /api/rates/service-charges-insert → /Service_Charges_Insert	feeAmountMOCKONLY stub still in use — real schema has no fee-amount field yet

Margin Setup	MarginSetupPanel	RatesContext	POST /api/rates/add-or-update-margin → /addOrUpdateMargin	Only consulted by transferMath when WHOLESALE_RETAIL_SPLIT_CONFIRMED=true
Country / Currency	CountryCurrencyPanel	RatesContext	POST /api/rates/update-csv-file-for-countries → /UpdateCsvfileForCountries	upsertCountryCurrency() — despite the name, confirmed as a normal JSON upsert, not a raw CSV upload
Propose Offer Rate	PartnerOfferRatePropose	RatesContext, PartnersContext, AuthContext	POST /api/rates/insert-partner-rates → /insertRemittancePartnerRates	Maker step of the maker-checker workflow
Offer Rate Approvals	PartnerOfferRateApprovals	RatesContext, AuthContext	GET /api/rates/obtain-all-pending-partner-offer-rates → /obtainAllPendingPartnerOfferRates POST /api/rates/confirm-partner-rate → /confirmRemittancePartnerRate POST /api/rates/cancel-partner-rate → /cancelRemittancePartnerRate	Checker step; self-approval block gated by SELF_APPROVAL_RESTRICTION_ENABLED
Current Offer Rate	PartnerOfferRateCurrent PartnerOfferRateLookupForm	RatesContext, PartnersContext	POST /api/rates/obtain-partner-rates → /obtainRemittancePartnerRates	
Offer Rate History	PartnerOfferRateHistory	RatesContext	POST /api/rates/obtain-partner-all-rates → /obtainRemittancePartnerAllRates	
Partner Commission	PartnerCommissionPanel	RatesContext, PartnersContext	POST /api/rates/obtain-partner-commission → /obtainRemittancePartnerCommission POST /api/rates/insert-or-update-partner-commission → /insertOrUpdateRemittancePartnerCommission	commissionType "FLAT" is unconfirmed with backend

COMPLIANCE

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Risk Profiling screens (High Risk Countries, High Risk Management, Payment Mode, Source of Income, Reason for Remittance, Sender Occupation, Relation, Customer Visa Type, Compliance Range, Age Group, High Risk Branches, Transaction Frequency)	HighRiskCountriesPanel, HighRiskManagementPanel, PaymentModeRiskPanel, SourceOfIncomeRiskPanel, ReasonForRemittanceRiskPanel, SenderOccupationRiskPanel, RelationRiskPanel, CustomerVisaTypeRiskPanel, ComplianceRangeRiskPanel, AgeGroupRiskPanel, HighRiskBranchesPanel, TransactionFrequencyPanel	local data	LOCAL	data/riskProfilingData.ts — no confirmed upstream risk-profiling endpoints yet; all 12 screens are demo-data only
Compliance Rules Setup	ComplianceRulesSetupPanel	ComplianceRuleContext	POST /api/compliance-rules/list → /obtainComplianceRule POST /api/compliance-rules/add → /addComplianceRule POST /api/compliance-rules/update → /updateComplianceRule POST /api/compliance-rules/delete → /deleteComplianceRule	Update is looked up by 'identifier', not numeric id

Compliance Rule Values	ComplianceRuleValuesPanel	ComplianceRuleContext, PartnersContext	POST /api/compliance-rules/value-specific → /obtainComplianceRuleValueSpecific POST /api/compliance-rules/value-specific-country → /obtainComplianceRuleValueSpecificCountry POST /api/compliance-rules/add-value → /addComplianceRuleValue POST /api/compliance-rules/update-value → /updateComplianceRuleValue	Response key 'ruleIdentifier' is normalized to 'complianceRuleIdentifier' client-side
Transaction Compliance Holds	ComplianceTxnHoldsPanel	direct (transactionApi)	GET /api/transactions/compliance-holds → /getAllCompileHoldRemittance	

UTILITY

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Transaction Query	TransactionQueryPanel	direct (transactionApi)	POST /api/transactions/view-transaction → /viewTransaction POST /api/transactions/by-staff → /getTransactionByStaff POST /api/transactions/by-ref-no → /getRemittanceByrefno POST /api/transactions/latest-by-username → /getRemittanceByUsernamefrompartners	Four query modes toggled in one form ("Track B")

AGENT

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Upload Files	AgentFileUploadPanel	direct (agentFileApi)	POST /api/agent-files/list → /obtainFileUploadedByAgent POST /api/agent-files/content → /obtainFileContentByFileName	

SECURITY

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Audit Tran Log	AuditTranLogPanel	local data	LOCAL	data/securityData.ts
Days Exceeded TXN Requests	DaysExceededTxnPanel	local data	LOCAL	data/securityData.ts

REMITTANCES

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Send Transaction	TransactionSendPanel	direct (transferApi) + RatesContext, PartnersContext, BeneficiariesContext, KycContext	POST /api/transfers → /transfers	Rate/fee/commission preview is computed client-side via lib/transferMath.ts, not a separate quote endpoint
Transfers	TransfersPanel	direct (transferApi) + RatesContext	GET /api/transfers?page&size&sort → /transfers GET /api/transfers/ref/{referenceNumber} → /transfers/ref/{referenceNumber} PUT /api/transfers/{id}/cancel → /transfers/{id}/cancel	Paginated list via lib/useTransfers.ts's usePaginatedTransfers hook ("Track A")

Transaction Rate Report	TransactionRateReportPanel	RatesContext (computed)	LOCAL (computed)	Recomputes/reads rateBreakdownMOCKONLY via lib/transferMath.ts's getOrComputeBreakdown — no dedicated report endpoint
Un-Confirmed List	UnconfirmedListPanel → UnconfirmedQueuePanel	direct (transactionApi)	GET /api/transactions/unconfirmed-admin → /getAllUnapprovedRemittances	Admin-facing unconfirmed queue ("Track B")
Un-Confirmed List (Partner API)	UnconfirmedListPartnerApiPanel → UnconfirmedQueuePanel	direct (transactionApi)	GET /api/transactions/unconfirmed-partner → /getAllUnapprovedRemittances2	Partner-API-facing variant of the same queue
Unpaid Transactions	UnpaidTransactionsPanel	lib/useConfirmedRemittances hook	GET /api/transactions/confirmed → /getAllConfirmedRemittances	Filters the confirmed list client-side for unpaid rows
Pending Transaction	PendingTransactionPanel	lib/useConfirmedRemittances hook	GET /api/transactions/confirmed → /getAllConfirmedRemittances	Same hook/endpoint as Unpaid Transactions, different client-side filter

USER MANAGEMENT AND SECURITY

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Audit User Rights - Partner	AuditUserRightsPartnerPanel	local data	LOCAL	No confirmed upstream endpoint
Create Head Office User	CreateHeadOfficeUserPanel	local data	LOCAL	data/userManagementData.ts — form has no submit endpoint wired yet
Create Partner User	CreatePartnerUserPanel	direct (partnersApi), TabsContext, PartnersContext	POST /api/partners/register → /insertRemittancePartner	Reuses the partner-registration endpoint to create a partner-scoped user
Head Office User Status	HeadOfficeUserStatusPanel	local data	LOCAL	No confirmed upstream endpoint
Manage Roles	ManageRolesPanel	lib/sidebarPrivileges.ts (derived from staticData)	LOCAL	Privilege tree is derived from the sidebar's nav structure, not fetched

OPERATIONS & ADMIN

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Report Writer	ReportWriterPanel	local data	LOCAL	data/reportWriterData.ts — no confirmed upstream endpoint
Report List	ReportListPanel	local data	LOCAL	data/reportWriterData.ts (SavedReport)

AUTHENTICATION & SESSION (CROSS-CUTTING, NOT A TAB)

FEATURE	COMPONENT	DATA SOURCE	API CALLS	NOTES
Login	LoginForm (app/login)	AuthContext	POST /api/auth/login → POST /api/auth/login GET /api/auth/validate → GET /api/auth/validate POST /api/partners/lookup → /obtainRemittancePartner	validate resolves username/roles right after login; partner lookup resolves the agent's own settlement currency
Logout	Topbar, LogoutConfirmModal	AuthContext	POST /api/auth/logout → POST /api/auth/logout	Best-effort call; local session is cleared regardless of the result

Session refresh (automatic)	lib/apiClient.ts (fetchWithAuth)	every lib/*Api.ts call	POST /api/auth/refresh → POST /api/auth/refresh	Triggered silently on any 401; concurrent 401s are coalesced into one refresh call
--------------------------------	-------------------------------------	---------------------------	--	---

Zio Money Admin — generated documentation. See docs/03-api-reference.md for full request/response field details of every endpoint listed above, and config/businessRules.ts for feature flags that gate unconfirmed business logic (wholesale/retail split, service fee source, cross-currency conversion, self-approval restriction).
